DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent Publication No. 07-057377 (Masaura), published on 03/03/1995.

As per claims 1 and 9, Masaura teaches an electronic circuit comprising control means for controlling a coil current through a coil for generation of a magnetic field, a data control circuit coupled to the control means for supplying data to the control means, wherein the control means comprises detection means for determining a parameter which is a measure for the resistance value of the coil and for supplying a temperature stop signal for at least temporarily stopping the supply of data to the control means when said parameter has exceeded a given value (e.g. Abstract and Figure 1).

As per claims 7-8, Masaura further teaches the device being a magneto-optical disk drive.

Claims 1 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent Publication No. 63-211103 (Hideo), published on 2/9/1988.

As per claims 1 and 9, Hideo teaches an electronic circuit comprising control means for controlling a coil current through a coil for generation of a magnetic field, a data control circuit coupled to the control means for supplying data to the control means, wherein the control means comprises detection means for determining a parameter which is a measure for the resistance value of the coil and for supplying a

Application/Control Number: 10/573,554

Art Unit: 2121

temperature stop signal for at least temporarily stopping the supply of data to the control means when said parameter has exceeded a given value (e.g. Abstract and Figure 3).

As per claims 7-8, Hideo further teaches the device being a magneto-optical disk drive.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over a)

Masaura and b) Hideo, as applied to claim 1 above, in further view of Official Notice.

As per claim 6, Official Notice is taken with respect to a thin film coil for use in a magnetic head as this feature represents a well known type of recording head that was well known to be used at early as 1995 and provided a way to allow smaller recorded features to be used, as evidenced by the "Disk read-and-write head" definition found using Wikipedia.com.

Allowable Subject Matter

Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

As per claims 2-5, specifically dependent claim 2, the prior art of record fails to teach the time indicator means for determining a time indication relative to the moment the temporary stopping the supply of data to the control means was last lifted, the time indication serving a measure for determining how long the next temporary stopping is to last, in combination with the other claimed features and or limitations as claimed.

Art Unit: 2121

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ronald D. Hartman Jr. whose telephone number is (571) 272-3684. The examiner can normally be reached on Mon.-Fri., 11:00 - 8:30 pm, EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anthony Knight can be reached on (571) 272-3687. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
